

Plastic products for the Sign industry (SOFT SIGNAGE)

Due to the increase of large format printers for both PVC banners and textile frames, the demand for solutions for fixing printed cloths to aluminium frames has dramatically increased. Printed fabric cloth in aluminium frames is used for the construction of exhibition stands, for example, in stores as an eye-catcher, or as a Point-Of-Sales communication aid. Textile frames are also being increasingly used in museums, offices and interiors.

Weft PVC cord

The weft PVC cord is made especially for those cases where a sewing machine is not available and stitching to the textile cloth is not possible. In particular, on very large printed canvases; for example, 20 metres long, 3 metres high, often three sides will be made up with PVC cord and the weft PVC cord will be used on the fourth, short side. The cloth is tightened, and the weft PVC cord hammered in. By hitting the PVC cord and the cloth into the profile, the cloth tightens up nicely over the textile frame. The excess cloth is then cut off. The weft PVC cord is available in two different designs and multiple colours. The interior width of the aluminium profile will determine your choice.

- Material:** PVC Shore-A 72
Dimensions: 7 x 12.4 mm
Surface: Ribbed
Colour: Transparent
Packaging: Pack onto rolls of 100 or 200 metres.
