

## The right support for every plant

Roffelsen Plastics manufactures various products that provide support to plants during their growing process. Roffelsen Plastics covers rod material (which may or may not be galvanised) that can serve as a support stand or bent into a ring. The combination makes an ideal plant support. Furthermore, Roffelsen Plastics produces many types of plastic connecting materials in two varieties: smooth and rigid. This binding wire can be used for professional applications, but it can also be delivered under a private label for the consumer market.

### Plant support

The combination of a bar and a bent ring makes the ideal plant support and promotes their growth. The rod can be galvanized as an option, and equipped with a weather-resistant PVC sheath.

Besides the sheathing process, Roffelsen Plastics also takes care of the procurement, further processing and assembly.

<b>Material:</b>	PVC Shore-A 90 with 1.6 mm steel core
<b>Dimensions:</b>	Exterior diameter: 2.8 mm
<b>Surface:</b>	Smooth
<b>Colour:</b>	Green
<b>Packaging:</b>	Pack onto rolls of 5 to 500 metres.
